STORAGECRAFT®
RECOVER-ABILITY™

Recover every time, everywhere. It may sound unrealistic, but with StorageCraft® Recover-Ability™, you can rest easy knowing you're ready, no matter what the disaster. StorageCraft Recover-Ability is a complete, end-to-end solution that gives you everything you need to recover from every disaster, big or small. The software and services that make up StorageCraft Recover-Ability work together to deliver everything you need to avoid disaster, and defeat it when necessary.

Backup

StorageCraft Recover-Ability starts before the disaster with fast, flexible, and reliable backup.

- Take image-based backup of everything, including operating system, applications, settings, and data.
- Schedule full, incremental, continuous incremental, and differential backups to meet recovery point objectives.
- Backup virtual and physical machines, servers, desktops, and laptops.

Manage

Then take control of your entire backup environment and know what's happening all the time.

- Monitor and manage your backup environment from a central console.
- Control storage space and consolidate backups.
- Check the status and verify backup image integrity.

Replicate

Plus, you need a complete copy of your systems and data in a different location so you know you can recover, no matter how destructive the disaster.

- Know your data is safe with secure data transfer.
- Throttle transfer speeds around your organization's schedule.
- Choose options to suit your needs, whether you're replicating to a public, private, or hybrid cloud, or to portable external media.

Test

Round out your business continuity plan by easily testing your recovery regularly.

- Virtualize backups so you know they'll work when you need them.
- Pre-stage backups to periodically test their integrity.
- Schedule disaster recovery testing onsite and offsite.

Recover

Sleep peacefully knowing you can recover every time, everywhere.

- Recover to the same hardware, new hardware, or to a virtual environment.
- Perform file and folder recovery in seconds.
- Virtualize a system onsite or offsite in minutes.
